

**IN THE CLAIMS:**

This listing of claims will replace all prior versions, and listings of claims in the application:

1. (Currently Amended) A method of communication for a facility, comprising:
  - receiving personal identification information of a guest into at least one of a set of stations distributed throughout the facility;
  - displaying on any of the stations at least one person icon or place icon on a map of the facility;
  - receiving from the guest physically located at the displaying station a select signal indicative of at least one of said person icons or place icons located within the facility;
  - selecting a certain route from the displaying station to a location of the selected one of said icons; and
  - displaying direction indicia from the location of the displaying station within the facility to the location of the selected one of said icons.
2. (Previously Amended) A method according to claim 1, wherein said place icon indicates an amenity, and further including displaying a menu message of a list of amenities disposed within the facility.
3. (Original) A method according to claim 2, further including receiving an amenity select signal indicative of at least one of said amenities.
4. (Original) A method according to claim 3, further including displaying at least one amenity icon in response to said amenity select signal.

5. (Previously Amended) A method according to claim 1, wherein said direction indicia is in the form of a line extending to the selected icon.
6. (Original) A method according to claim 1, further including determining a direct route to the selected icon, said direction indicia being indicative of the determined direct route.
7. (Original) A method according to claim 1, further including determining a scenic route to the selected icon, said direction indicia being indicative of the determined scenic route
8. (Original) A method according to claim 1, further including determining a handicapped person's route to the selected icon, said direction indicia being indicative of the handicapped person's route.
9. (Original) A method according to claim 1, further including displaying at least two of a group of person icons and place icons, said direction indicia between said at least two icons.
10. (Currently Amended) A system of communication for a facility, comprising:
  - means for receiving personal identification information of a guest into at least one of a set of stations distributed throughout the facility;
  - means for displaying on any of the stations at least one person icon or place icon on a map of the facility;
  - means for receiving from the guest physically located at the displaying station a select signal indicative of at least one of said person icons or place icons;

means for selecting a certain route from the displaying station to a location of the selected one of said icons located within the facility; and

means for displaying direction indicia from the location of the displaying station within the facility to the location of the selected one of said icons.

11. (Previously Amended) A system according to claim 10, wherein said place icon indicates an amenity, and further including means for displaying a menu message of a list of amenities disposed within the facility.
12. (Original) A system according to claim 11, further including means for receiving an amenity select signal indicative of at least one of said amenities.
13. (Original) A system according to claim 12, further including means for displaying at least one amenity icon in response to said amenity select signal.
14. (Previously Amended) A system according to claim 10, wherein said direction indicia is in the form of a line extending to the selected icon.
15. (Original) A system according to claim 10, further including means for determining a direct route to the selected icon, said direction indicia being indicative of the determined direct route.
16. (Original) A system according to claim 10, further including means for determining a scenic route to the selected icon, said direction indicia being indicative of the determined scenic route
17. (Original) A system according to claim 10, further including means for determining a handicapped person's route to the selected icon, said direction indicia being indicative of the handicapped person's route.

18. (Original) A system according to claim 10, further including means for displaying at least two of a group of person icons and place icons, said direction indicia between said at least two icons.
19. (Currently Amended) A software system of communication for a facility, comprising:
  - module for receiving personal identification information of a guest into at least one of a set of stations distributed throughout the facility;
  - module for displaying at any of the stations at least one person icon or place icon on a map of the facility;
  - module for receiving from the guest physically located at the displaying station a select signal indicative of at least one of said person icons or place icons;
  - module for selecting a certain route from the displaying station within the facility to a location of the selected one of said icons; and
  - module for displaying direction indicia from the location of the guest to the selected one of said icons.
20. (Previously Amended) A software system according to claim 19, wherein said place icon indicates an amenity, and further including module for displaying a menu message of a list of amenities disposed within the facility.
21. (Original) A software system according to claim 20, further including module for receiving an amenity select signal indicative of at least one of said amenities.

22. (Original) A software system according to claim 21, further including module for displaying at least one amenity icon in response to said amenity select signal.
23. (Previously Amended) A software system according to claim 19, wherein said direction indicia is in the form of a line extending to the selected icon.
24. (Original) A software system according to claim 19, further including module for determining a direct route to the selected icon, said direction indicia being indicative of the determined direct route.
25. (Original) A software system according to claim 19, further including module for determining a scenic route to the selected icon, said direction indicia being indicative of the determined scenic route.
26. (Original) A software system according to claim 19, further including module for determining a handicapped person's route to the selected icon, said direction indicia being indicative of the handicapped person's route.
27. (Original) A software system according to claim 19, further including module for displaying at least two of a group of person icons and place icons, said direction indicia between said at least two icons.
